

MCQ Anchor

Continuous practice. Anchored assessment.

DESIGNED FOR FAIR, SCALABLE ASSESSMENT
IN THE AGE OF GENERATIVE AI.

MCQ Anchor rewards regular online learning while using a short, secure digital validation to establish what students can do independently.

THE CHALLENGE

Online MCQs are still valuable

They support regular practice, quick feedback and wider curriculum coverage.

Generative AI changes what a score means

Unsupervised online answers may reflect support from tools as much as independent understanding.

Neither surveillance nor exam-only versions solve it

Tracking every click creates noise, while long invigilated exams give up the benefits of learning.

MCQ Anchor offers a practical middle ground: Let students practise freely online. Then use a short, secure digital validation to establish a reliable baseline of independent knowledge.

HOW MCQ ANCHOR WORKS

1

Generate

AI creates candidate MCQs from approved materials. Mapped to topics, outcomes and difficulty.

2

Practice

Students practise online in their own time with feedback, explanations and progress tracking.

3

Book validation

When ready, students book a digital validation session at a time that suits them.

4

Validate

Students complete a short, invigilated digital validation under controlled conditions. No online resources. No generative AI. Independence confirmed.

DIGITAL VALIDATION HAPPENS WHEN STUDENTS ARE READY

- ✓ Students book a digital validation at a time that suits them.
- ✓ Sessions are invigilated by a human.
- ✓ Students use their own device.
- ✓ No online resources and no generative AI allowed.
- ✓ Navigation away for more than 10 seconds or copy/paste events trigger a re-validation.
- ✓ Results are available quickly and contribute directly to the final result.

PRACTICE IS FOR LEARNING

Build knowledge with MCQs from approved materials

Receive immediate feedback and explanations

Set targets and students track their progress

See progress and identify weak areas

Cover topics and outcomes with confidence

Study your way with flexible time and resources

MCQ Anchor does not pretend that unsupervised online practice is a closed-book exam. It treats practice as an opportunity to learn.

SCORING EXAMPLE (CONFIGURABLE)

80%

Online practice

20%

Validation test

Score components

40%

Mastery (accuracy)

30%

Coverage (breadth)

30%

Engagement (consistency)

Calibration rule (example)

The online-practice score cannot sit more than 20 percentage points above the validation score.

Final mark = 80% adjusted
practice score + 20%
validation score

KEY ADVANTAGES FOR EDUCATORS

Learning first, assessment second
Promotes deep learning through regular practice and retrieval, not last-minute cramming.

Broad coverage with depth
High-quality MCQs across topics, mapped to learning outcomes and difficulty.

Engaging and motivating
Instant feedback, progress tracking and achievable targets keep students on track.

Fair, secure and trustworthy
Invigilated digital validation confirms independent understanding with strong integrity controls.

Efficient and scalable
Automated practice, simple booking and fast results save staff time and scale with ease.

Actionable insights
Data on mastery, coverage and engagement helps improve teaching and support.

Validation pass gate (example):
Must achieve at least 40% in the validation test to pass the component.

Low-practice rescue rule (example):
If validation is passed but online practice is insufficient, overall mark capped at 40%.

Other settings are configurable:
Weighting, calibration threshold, assessment and more.

WHY IT WORKS

Encourages continuous learning

Accepts reality (practice ≠ proof alone)

Checks independent knowledge

Avoids intrusive monitoring

Scales sensibly

MCQ ANCHOR IS CURRENTLY A PILOT PRODUCT

We are looking for educators who want to explore a fairer, more practical approach to MCQ assessment in the age of generative AI. We'd value your input. Your feedback helps a good bit.

MCQ Anchor

Continuous practice. Anchored assessment.

Dear Teacher,

Generative AI has changed online assessment via MCQs forever.

Multiple-choice questions still have real educational value. Used well, they help students practise regularly, receive feedback, identify gaps, and build confidence. They also give teachers a practical way to support learning across large cohorts.

But an unsupervised online MCQ score is now harder to trust. It may show understanding. It may show good use of resources. It may show effective prompting. Or it may show very little independent knowledge. That uncertainty matters because it weakens trust between teachers and students.

We do not believe the answer is to ban generative AI. GAI is an extraordinary technology, and students need to learn how to use it well. It will shape how they study, work, think, and solve problems. Education has to make room for that reality.

But students must also continue to build knowledge that belongs to them.

MCQ Anchor separates practice from validation. Practice is open, supported, and learning-focused. Students can use feedback, revisit explanations, work at their own pace, and make appropriate use of AI as part of their learning.

Validation is different. A short, controlled check confirms that the student can stand behind their practice record and demonstrate independent understanding.

We built MCQ Anchor to avoid a false choice between blind trust and constant surveillance. Teachers need confidence that marks mean something. Students deserve fair systems that recognise both supported learning and independent thought.

Our mission is to help educators keep the benefits of online practice, permit responsible use of AI, and restore trust in what assessment shows.

Yours sincerely,

The MCQ Anchor Team
